

geological maps

This series comprises over 25 full colour geological maps of New Zealand, including urban areas, and Antarctica. Most maps are accompanied by substantial explanatory text.

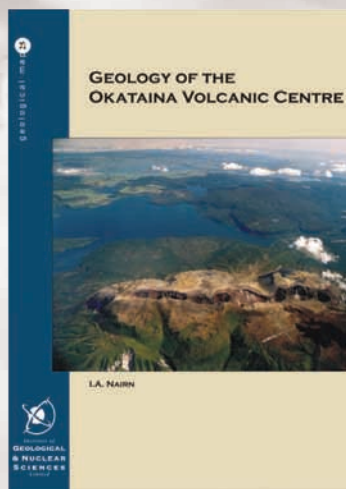

Geology of the Whangarei Urban Area

1:25,000

This geological map and accompanying text covers an area of 170 km², including Whangarei City and some of the immediately surrounding rural areas. Volcanic landforms include the large domes of Parahaki and Parakiore, smaller scoria cones, and extensive lava flows in the Whangarei urban landscape. The text includes a brief account of local geological hazards and resources; mainly coal, limestone, aggregate and clay.

\$50.00

Geology of the Okataina Volcanic Centre

1:50,000

The Okataina Volcanic Centre is still active, having erupted over 80 cubic kilometres of molten rock in eleven major eruptive episodes during the last 22,000 years, including the latest eruption at Tarawera - Rotomahana in 1886 AD. The sequence of volcanic events and volcanic geology described and illustrated in this book and map provide a valuable source of information for scientists, engineers, regional and territorial authorities, hazard managers and the public. The map covers the area between Rotorua, Waitapu and Kawerau, including the Okataina Volcanic Centre and part of Rotorua Caldera.

\$50.00

Geological maps are available for the following areas:

Geological maps 1:50,000

except:

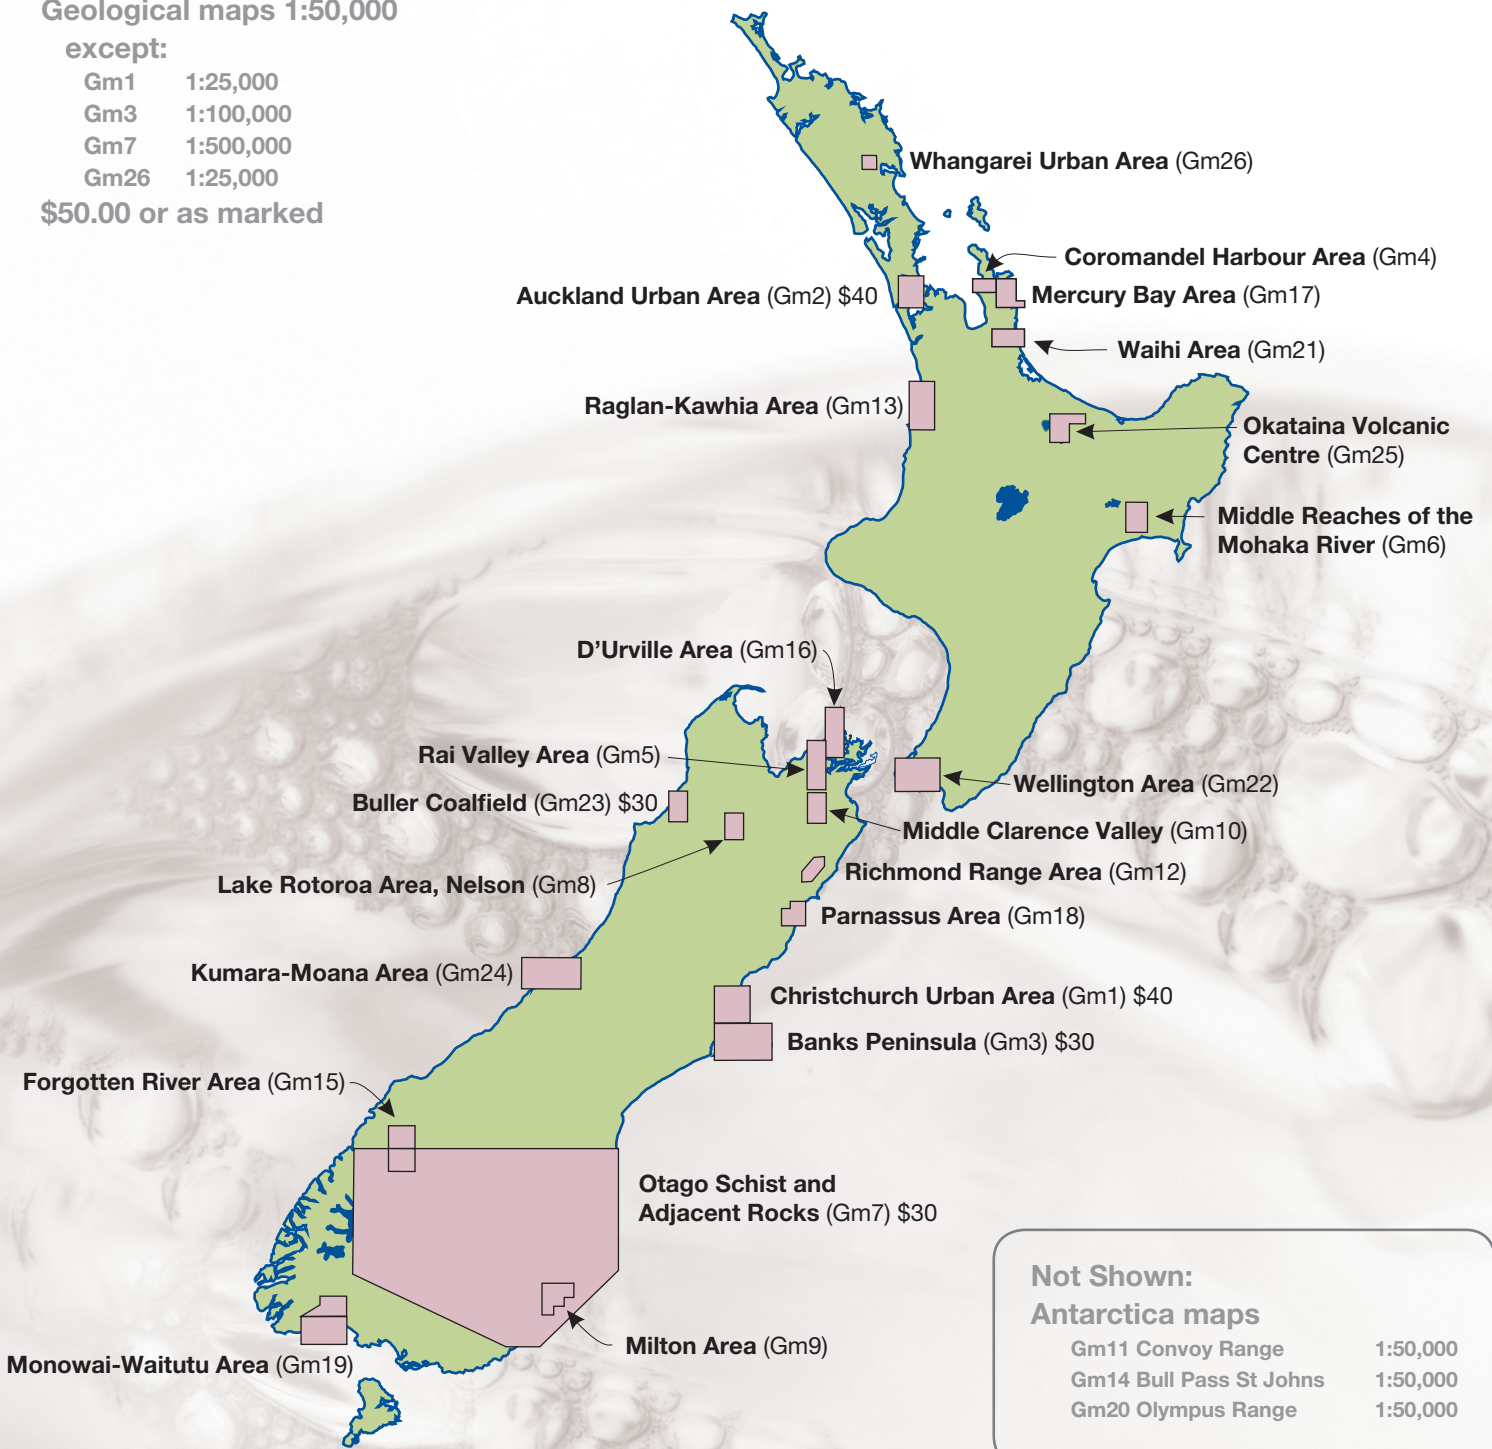

Gm1 1:25,000

Gm3 1:100,000

Gm7 1:500,000

Gm26 1:25,000

\$50.00 or as marked

Not Shown:

Antarctica maps

- Gm11 Convoy Range 1:50,000
- Gm14 Bull Pass St Johns 1:50,000
- Gm20 Olympus Range 1:50,000
